

# DART Real Time Bus Information

- DART First State is pleased to announce the release of an innovative mobile and web application that allows Fixed Route transit customers to view real time bus arrival information. The DeIDOT mobile app will be enhanced with new transit features that will allow users to select any DART fixed route bus stop, receive bus stop-based arrival times and view live updates as a bus icon tracks real time bus positions along the selected route's path of travel.
- The application was developed internally by staff members from several DeIDOT divisions, using data collected by DART's existing multi-million dollar transit dispatch system at the core of its statewide operation. The DeIDOT mobile app is free and available to anyone using a smartphone device (iOS and Android). To download the free DeIDOT mobile app search for "DeIDOT" at the Google Play and Apple App stores. The app can also be accessed on the web via DeIDOT's interactive map found at [www.deldot.gov](http://www.deldot.gov).
- Real time information is dependent on a wide variety of factors including telecommunications, internal processing, road conditions, and other operational elements. If you have feedback about improvements to this mobile application please [contact us](#).
